

Drawings.

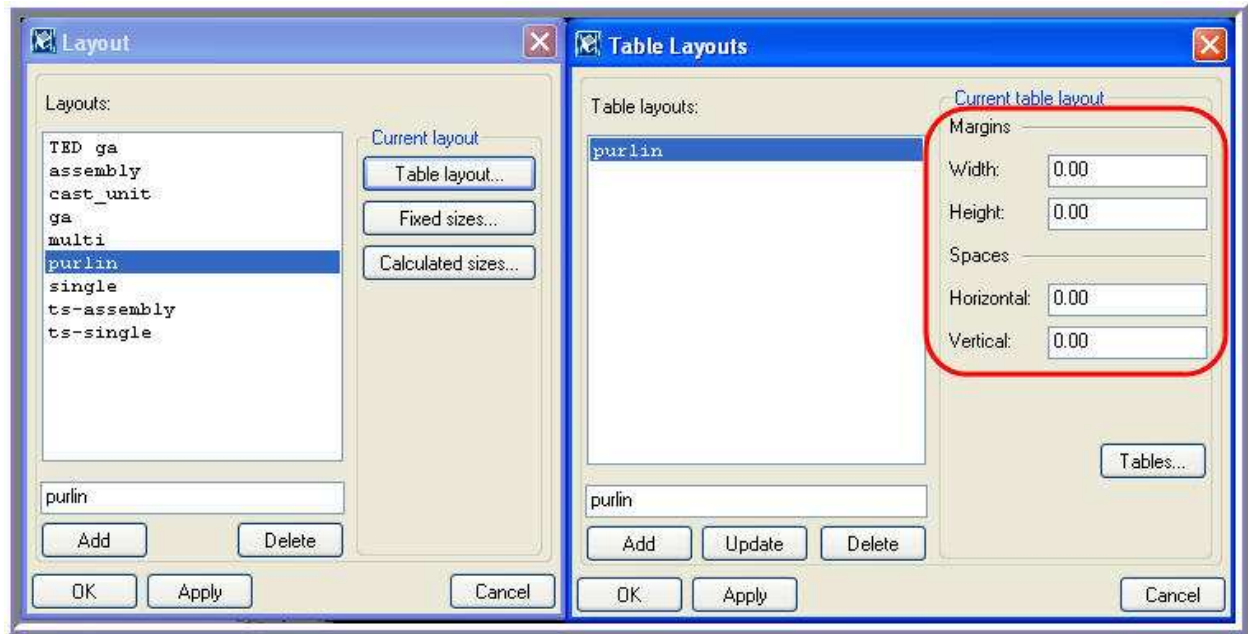

- The standard.cs (standard file for Section Symbols on drawings) has been edited to make the section view labels come in below the view.

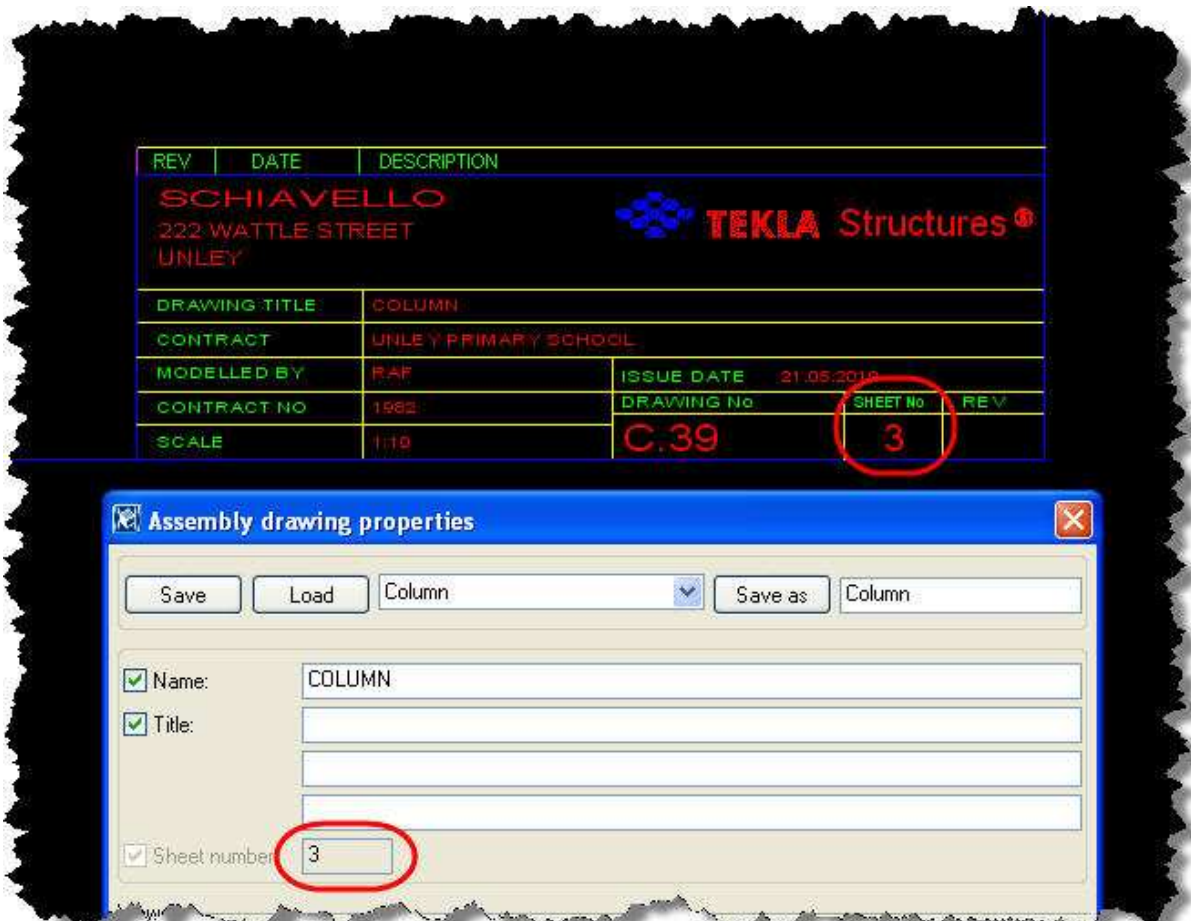

- The Assembly Drawing presentation files were altered so that exaggerated dims are switched off by default.

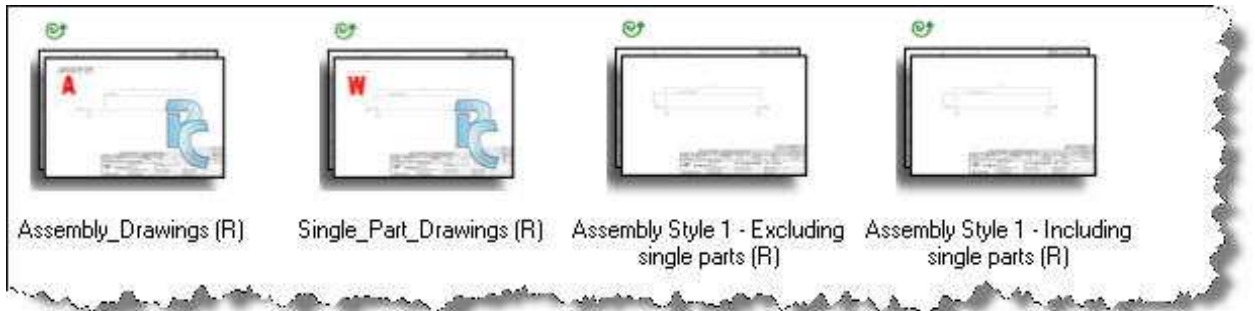

- The purlin.lay file was modified to set the 'Margins' and 'Spaces' to zero and to make the call off and material list transparent to help all Purlin sizes fit onto the A4's.

- We have modified the title blocks to include a sheet number.

- We have added localised PNG images to the Master Drawing Catalog thumbnails.

- All GA drawing presentation files (*.gd) have been updated to use “short extension lines” for grid dimensions.
