

Profile & Bolt Catalogs.

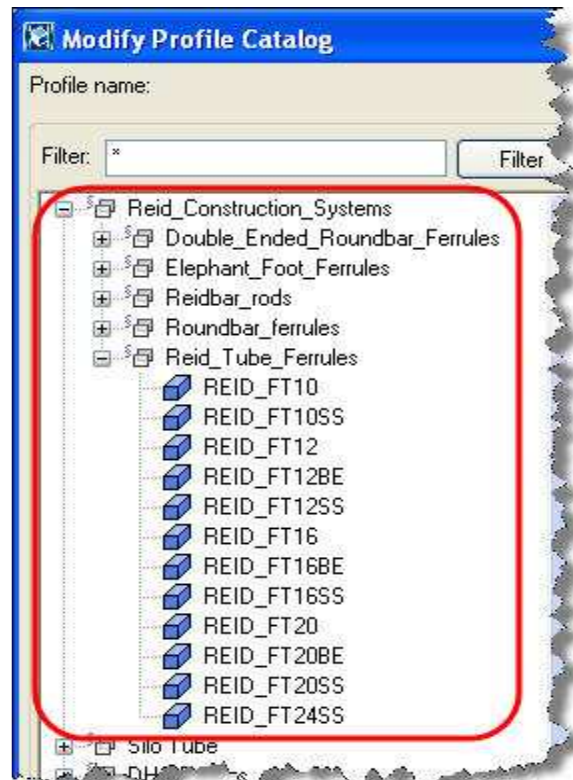

- The profile catalogue has been updated to add some new CHS, RHS and SHS profiles from the One Steel Catalogue.

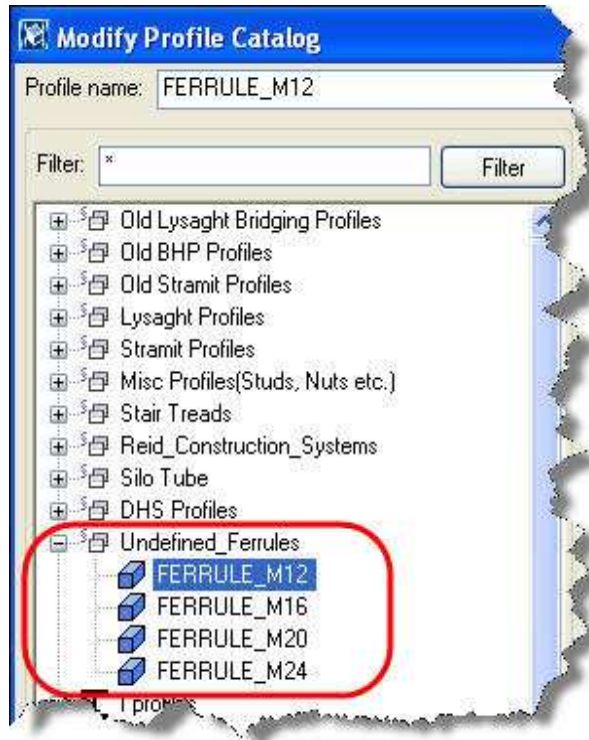

- Hex shaped Nuts have been added to the profile catalogue.

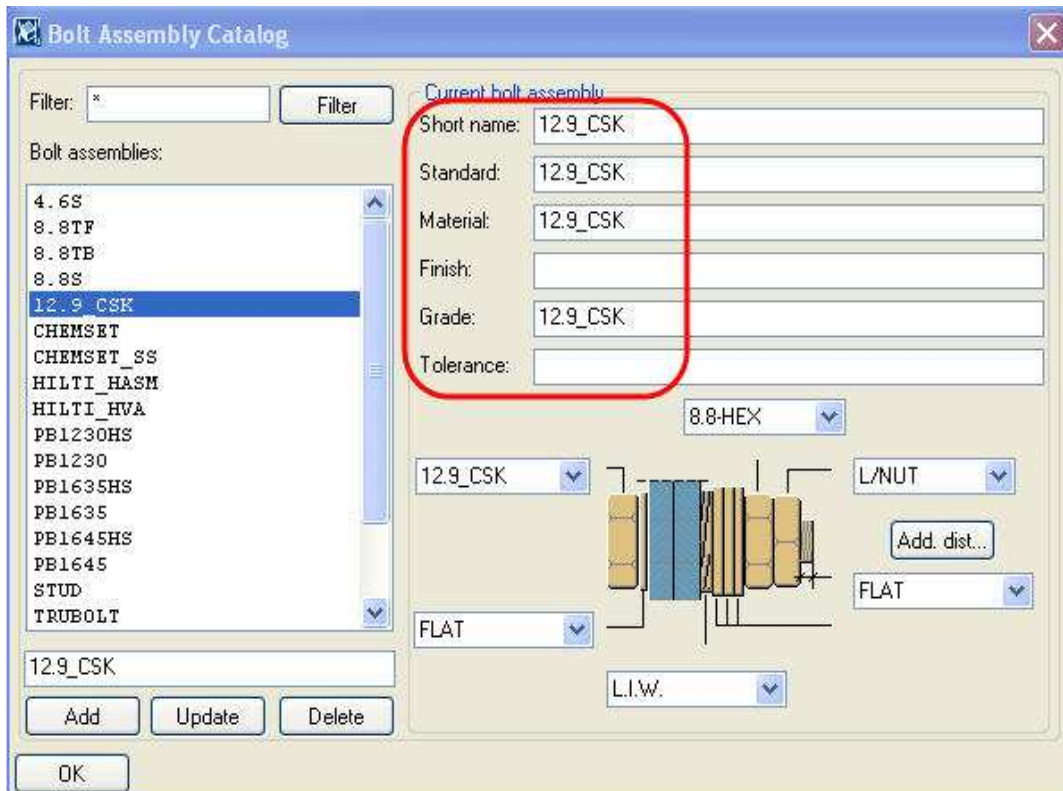

- Reidbar and Reid ferrules have been added to the profile catalogue.

- A range of undefined ferrules have been added to the profile catalogue.

- The bolt assembly catalogue (assdb.db) has been fixed so 12.9_CSK is called up correctly in the drawings. The Short Name, Standard etc.. were set at 8.8S.

- The new Stramit EZ's & EC's have been added to brnam.dat and overlap.dat. The EZ and EC Purlins are different sizes to the existing Stramit Zeds and Cees so we have adjusted the overlap.dat to position the bolts centrally in the Purlin.
