

Templates.

- The Assembly Call off template has been updated to include Finish.

- Erection notes fixed so they work with Pre-Cast GA's.

The screenshot displays the Tekla Structures software interface. On the left, the 'Project Properties' dialog box is open, showing fields for Project number (100), Name, Builder (Pacific Computing), Address (80 Tribune Street), Designer (Modelled by), Start date (South Brisbane), and Info 1 (22). Below these fields is a 'User-defined attributes...' checkbox which is checked. The 'Drawing Notes' panel is also visible, showing a list of 'General Note Line' and 'Erection Notes Line' with checkboxes and input fields. The 'Erection Notes' section is populated with 'Testing 1' through 'Testing 7'. On the right, an Adobe Reader window is open, displaying a PDF document titled '1 - MP1.pdf'. The PDF content shows a table with the heading 'Erection Notes' and a list of 'Testing 1' through 'Testing 7'. The bottom of the screenshot shows a blue area with a dashed white line, likely representing a drawing or model view.
