

Modified system files.

System file locations have moved for most system files since version 15. Please try to install to the **C:\Program Files** folder. If previous versions 15 and below have been run on the computer then this will not default to that location and will should to be re-directed to the program files folder.
The Tekla files will be stored on the PC as shown on the diagram below.

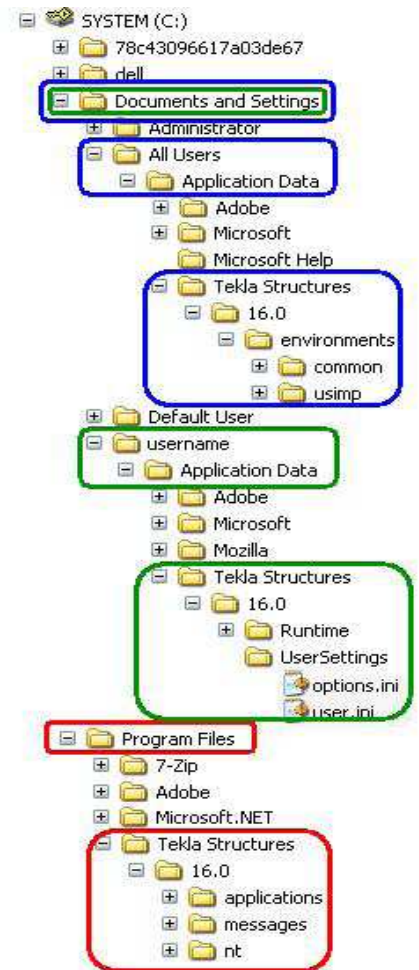

Version 15

V16.0 on Windows Vista

V16.0 on Windows XP

- Software
- Environments
- User settings
