

4. Drawings

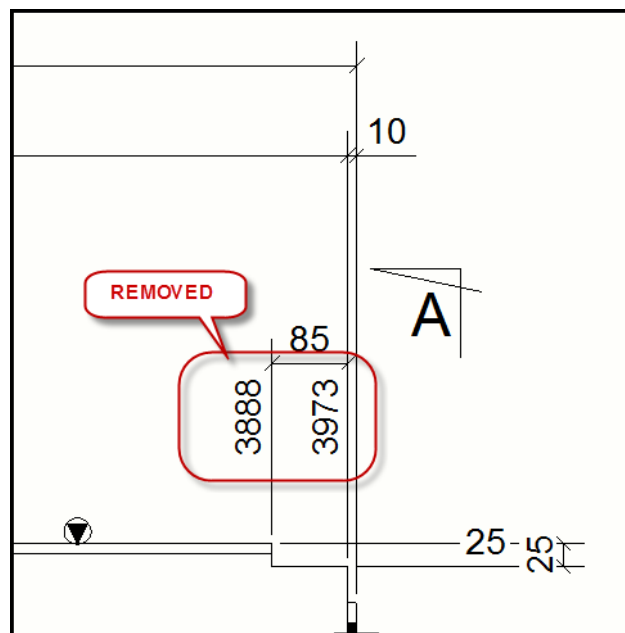

- We have streamlined the Master Drawing Catalog into a new 'easy to use' folder structure. We have also updated the Thumbnails to be more representative of the drawing style.

- We added the following Level property files to the engineering role which have Engineering Layout style prefixes for Level Marks:
 - Engineering.lev
 - RL_Varies.lev
 - TOC.lev

- XS_NO_RELATIVE_SHAPE_DIMENSIONS in the env_Australasia.ini file has been set OFF so that the Relative dimensions are no longer set out for notches and copes.

- We have saved the default Assembly Drawing Property settings to match the settings contained in the 'BEAM' settings so that you can now create a quick assembly drawing of a part using the right mouse click option and get a good result.
